

WINNICA TURNAU SZLACHETNY ZBIÓR 2023

WINE DESCRIPTION

Szlachetny Zbiór (Noble Harvest) is created thanks to specific conditions in the vineyard. Late harvested Solaris grapes, thanks to morning fogs and warm autumn days, are covered with botrytis cinerea. It damages the skin of the grapes, depriving them of some water. The fruit becomes more concentrated in sugars and organic acids. The wine ferments to a low alcohol level, and most of the sugar remains in the form of natural sweetness. The acidity balances this sweetness, which makes Noble Harvest pleasant to drink and works great as a food companion. It smells of acacia honey and peach syrup, which is consistently felt in the mouth. In addition, there is the taste of sweet pear and a hint of tangerine. Acidity keeps sugar in check with a citrus aftertaste and gives the wine lightness.

WINE AROMAS

acacia honey, tropical fruits

TASTE OF WINE

sweet pear, a hint of tangerine, lime

FOODPAIRING

cheese, pates, desserts

WINE PARAMETERS

residual sugar: 111 g/l

acidity: 9,3 g/l

alcohol content: 8,5%

GRAPE VARIETIES

solaris

VINIFICATION

Grapes partially covered with botrytis. Fermentation in stainless steel.

TERROIR

Winnica Turnau is located in Baniewice, in the southwestern part of the West Pomeranian Voivodeship. This unique region is influenced by air masses from the Atlantic Ocean and the Baltic Sea, as well as the proximity of the Oder River. All these factors shape a climate characterized by a long growing season, warm summers, and mild winters. Such conditions favor the cultivation of demanding grape varieties, allowing them to reach optimal ripeness while maintaining high acidity. Our region is distinguished by a rich network of oxbow lakes, gently rolling moraine hills, and an abundance of flora and fauna. The vineyard is situated on a moraine hill, where the predominant soils are sandy-clay, clay, moderately compact, and moderately permeable. This terroir, combined with ecological viticulture, results in grapes of exceptionally high quality.

WEATHER DURING THE GROWING PERIOD

The winter of 2022/2023 was frosty with moderate snow cover. The beginning of spring was frosty, but vegetation started a little earlier than in recent years. May was cool but dry, frosts surprised at the beginning of June. Summer 2023 was very rainy, especially at the end of fruit ripening, which increased disease pressure and forced a large collective selection. The autumn was moderately warm, with heavy rainfall from the middle of the harvest. The harvest started on time.
